VI. Conclusion

Existing Lateral System

- Ordinary Moment Frames and Ordinary Braced Frames
 - Red-Moment Frames
 - Green- Braced Frames
- Typical beam in moment frames are W24s and W27s
- Typical brace are W10s and W12s

Problem Statement

- I. Building Overview
- II. **Design Proposal**
- III. Gravity System
 - I. Voided Concrete Slab
 - II. Gravity Columns
- IV. Lateral System
 - I. Shear Wall Layout
 - II. Shear Wall Design
- V. Construction Breadth
- VI. Conclusion

What alternate system
could be a feasible design?

Goals

- Reduce structural depth
- Reduce cost
- Maintain open floor plan

Brendan Iribe Center for Computer Science and Innovation

- I. Building Overview
- II. Design Proposal**
- III. Gravity System
 - I. Voided Concrete Slab
 - II. Gravity Columns
- IV. Lateral System
 - I. Shear Wall Layout
 - II. Shear Wall Design
- V. Construction Breadth
- VI. Conclusion

Gravity System

Voided Concrete Slab

Lateral System

Reinforced Concrete Shear Walls

- I. Building Overview
- II. Design Proposal
- III. Gravity System
 - I. Voided Concrete Slab
 - II. Gravity Columns
- IV. Lateral System
 - I. Shear Wall Layout
 - II. Shear Wall Design
- V. Construction Breadth
- VI. Conclusion

Advantages of a Voided Concrete Slab

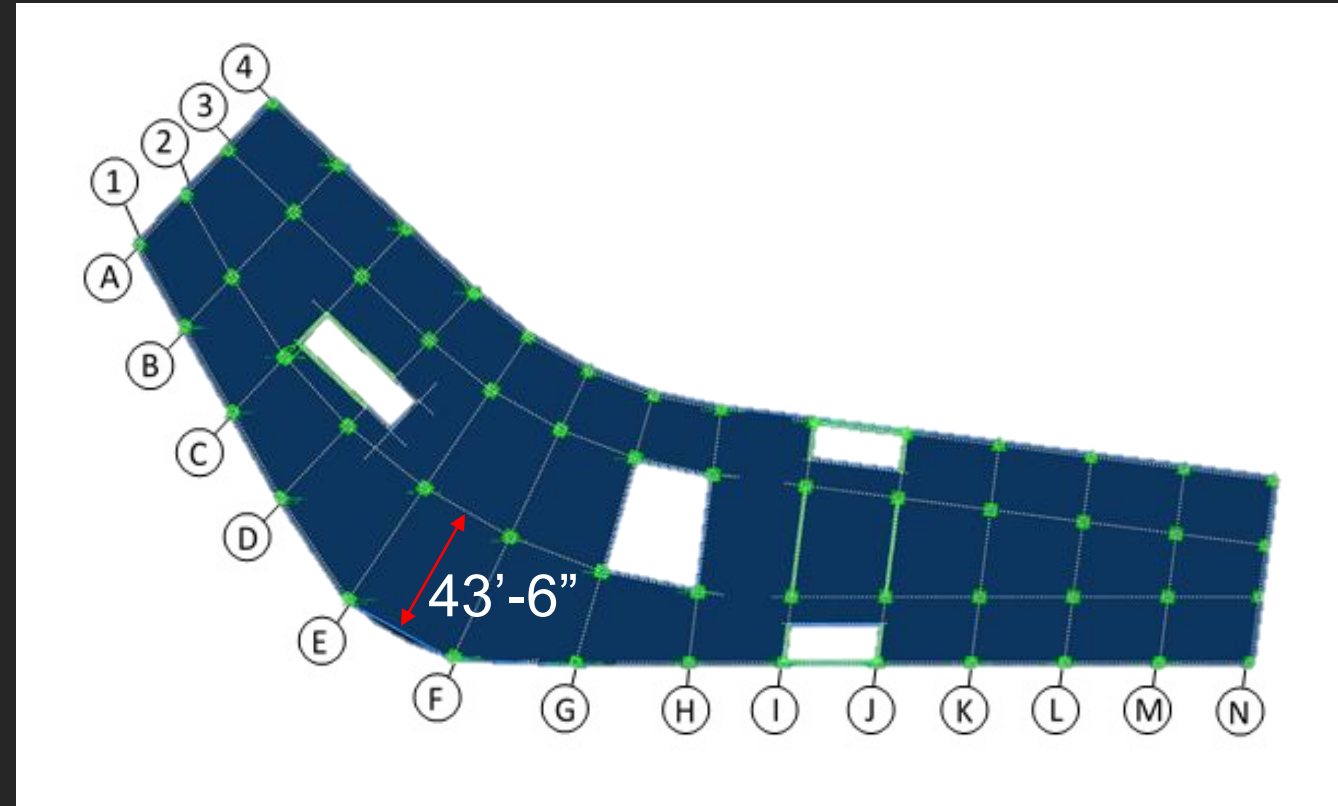

- Reduces self weight by ~30-35%
- Reduces structural depth
- Reach longer spans than flat plate slab

Brendan Iribe Center for Computer Science and Innovation

Gravity Redesign- Voided Slab

- I. Building Overview
- II. Design Proposal
- III. Gravity System
 - I. Voided Concrete Slab
 - II. Gravity Columns
- IV. Lateral System
 - I. Shear Wall Layout
 - II. Shear Wall Design
- V. Construction Breadth
- VI. Conclusion

From Table 8.3.1.1, minimum slab thickness:

$$h_{min} = \frac{l_n}{30} = \frac{(43.5 * 12) - (\frac{30}{2} + \frac{24}{2})}{30} = 16.5''$$

Exterior panel without edge beam without drop panel

Brendan Iribe Center for Computer Science and Innovation

Gravity Redesign- Voided Slab

- I. Building Overview
- II. Design Proposal
- III. Gravity System
 - I. Voided Concrete Slab
 - II. Gravity Columns
- IV. Lateral System
 - I. Shear Wall Layout
 - II. Shear Wall Design
- V. Construction Breadth
- VI. Conclusion

Cobix Eco-Line System

Slab depth (in)	17.5
Dead load reduction (psf)	-66
Stiffness correction factor	0.91
Shear reduction factor	0.55
Cage module support height (in)	12 5/8
Void former height (in)	12 3/8
Void former horizontal dimension (in)	12 3/8
Spacing between void formers (in)	1 3/8
Void formers center line spacing (in)	13 3/4
Number of void formers per sq ft	0.76
Concrete displacement per sq ft (cubic ft)	0.44
Void formers per cage module	7
Equivalent area per cage module (sq ft)	9.25

17.5" slab depth

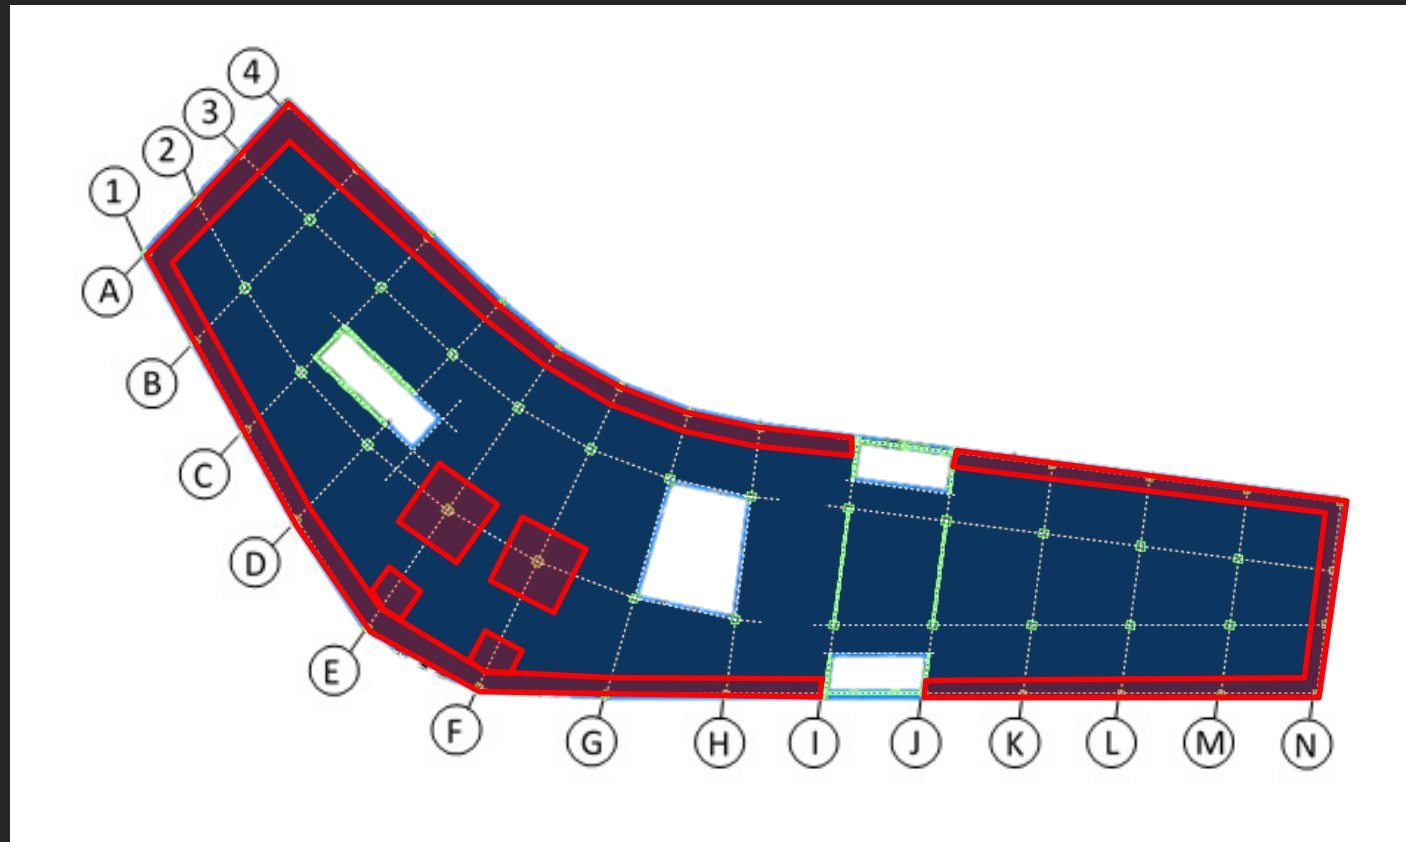

Reduced dead load = 66 psf

New slab weight

$$= \frac{17.5 * 150}{12} - (.7 * 66) = 172.5 \text{ psf}$$

Gravity Redesign- Voided Slab

- I. Building Overview
- II. Design Proposal
- III. Gravity System
 - I. Voided Concrete Slab
 - II. Gravity Columns
- IV. Lateral System
 - I. Shear Wall Layout
 - II. Shear Wall Design
- V. Construction Breadth
- VI. Conclusion

Solid slab required in two locations:

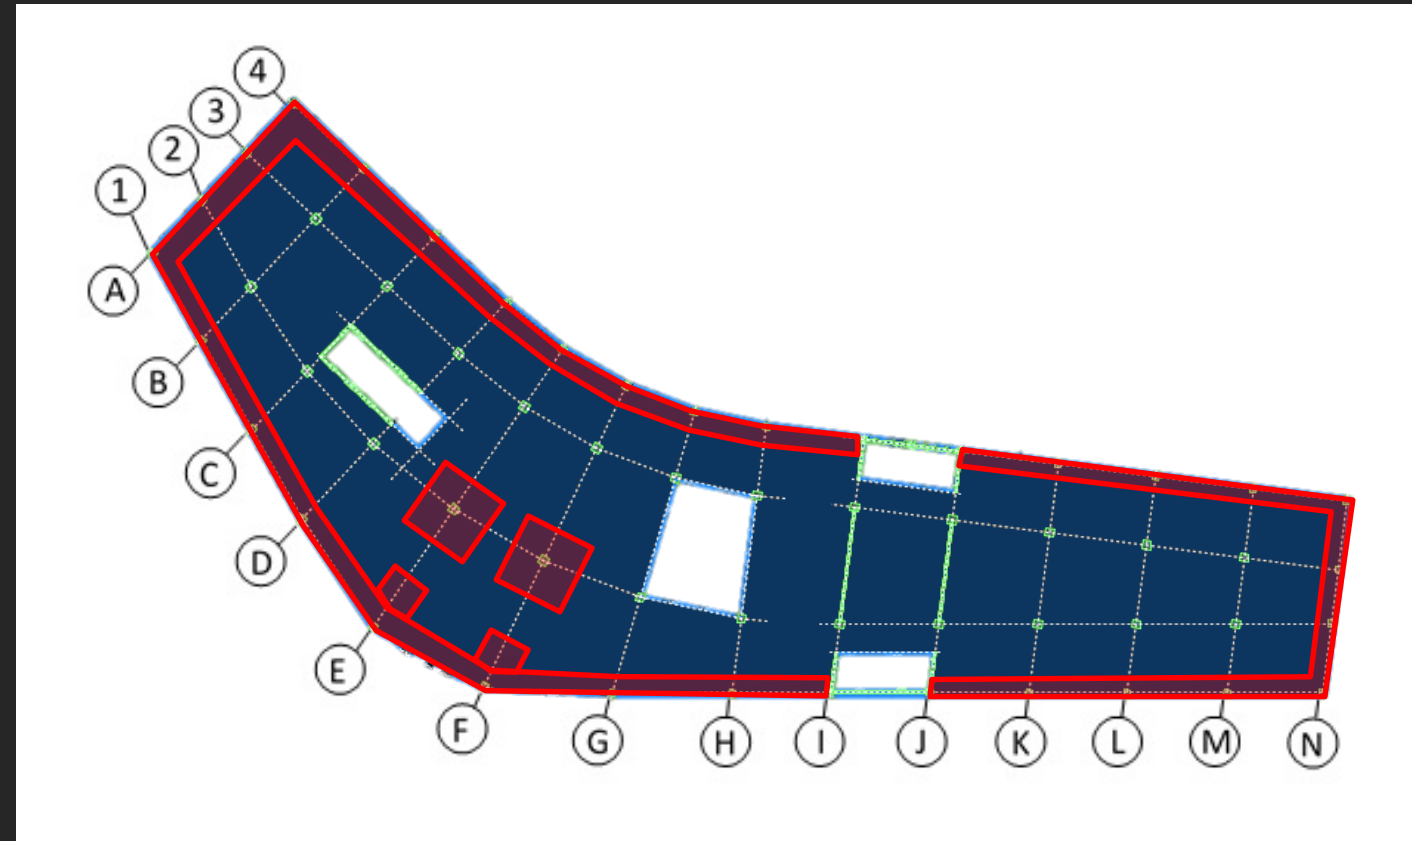

- 1) Perimeter of floor plate
- 2) Around columns where voided slab can't resist total shear stress

$$\text{Solid slab} = \text{Triangular area} - \frac{(\text{Shear reduction factor})(\text{Allowable shear})}{\text{Total factored uniformly dist. load}}$$

Brendan Iribe Center for Computer Science and Innovation

Gravity Redesign- Voided Slab

- I. Building Overview
- II. Design Proposal
- III. Gravity System
 - I. Voided Concrete Slab
 - II. Gravity Columns
- IV. Lateral System
 - I. Shear Wall Layout
 - II. Shear Wall Design
- V. Construction Breadth
- VI. Conclusion

Column E1= 200 ft²

Column E2= 450 ft²

Column F1= 166 ft²

Column F2= 450 ft²

Brendan Iribe Center for Computer Science and Innovation

Goals Achieved?

- Reduce structural depth ✓
- Reduce cost ✓
- Maintain open floor plan ✓

Drawbacks

- Increase in structural weight
- Increase in foundation
- Longer construction schedule

Reinforcement Summary

<u>Longitude Direction</u>						
			M _u	A _s	Ram Reinforcing	OK?
End span	Column Strip	Exterior negative	-595	8.29	14#9 = 14.0	OK
		Positive	709.4	9.79	mat** + 6#7 = 15.0	OK
		Interior negative	-1212.9	17.3	19#9 = 19.0	OK
	Middle Strip	Exterior negative	0	0	-	
		Positive	480.6	7.25*	mat** + 1#7 = 12.0	OK
		Interior negative	-389	7.25*	12#9 = 12.0	OK
Interior span	Column Strip	Positive	480.6	7.25*	mat** + 1#7 = 12.0	OK
		Negative	-1121.4	15.8	24#9 = 24.0	OK
	Middle Strip	Positive	320.4	7.25*	mat** = 11.4	OK
		Negative	-366.2	7.25*	22#9 = 22.0	OK
<u>Latitude Direction</u>						
			M _u	A _s	Ram Reinforcing	OK?
Interior span	Column Strip	Positive	485.3	7.18*	mat** = 11.4	OK
		Negative	-1132.4	16.1	31#7 = 18.6	OK
	Middle Strip	Positive	323.6	7.18*	mat** = 11.4	OK
		Negative	-369.8	7.18*	17#6 = 10.2	OK
* denotes A _s min is used						
** mat consists of #7@12" each way						

Table 10: Wind in north-south direction comparison

		Calculated	RAM	
Level	Height (ft)	Fy (kips)	Fy (kips)	% error
1st Floor	24.5	189.26	193.82	2.35
2nd Floor	38.17	145.28	148.92	2.44
3rd Floor	51.8	152.44	156.53	2.61
4th Floor	65.6	158.17	162.71	2.79
5th Floor	79.17	163.9	167.99	2.43
Penthouse	92.83	200.04	205.85	2.82
Roof	111.68	119.56	121.55	1.64
	Base Shear	1128.65	1157.37	2.48

Table 11: Wind in east-west direction comparison

		Calculated	RAM	
Level	Height (ft)	Fx (kips)	Fx (kips)	% error
1st Floor	24.5	124.39	105.32	18.11
2nd Floor	38.17	95.48	72.98	30.83
3rd Floor	51.8	75.85	66.41	14.21
4th Floor	65.6	78.71	68.88	14.27
5th Floor	79.17	81.56	71.57	13.96
Penthouse	92.83	99.54	88.21	12.84
Roof	111.68	59.5	52.57	13.18
	Base Shear	615.03	525.94	16.94

Table 12: Seismic story shear comparison

		Calculated	RAM	
Level	Height (ft)	Fx (kips)	Fx (kips)	% error
1st Floor	24.5	108.6	114.57	5.21
2nd Floor	38.17	178.28	188.93	5.64
3rd Floor	51.8	173.25	190.59	9.10
4th Floor	65.6	227.04	246.17	7.77
5th Floor	79.17	282.6	302.86	6.69
Penthouse	92.83	343.62	373.14	7.91
Roof	111.68	548.08	574.59	4.61
	Base Shear	1861.47	1990.85	6.50
